Grain and Feed

Revised Grain Production in Poland will Result in Increased Intervention

2006

Approved by:

Ed Porter, Agricultural Counselor U.S. Embassy

Prepared by:

EP/WFM

Report Highlights:

Intervention purchases of Polish grain could be significantly higher than a year ago.

Includes PSD Changes: No Includes Trade Matrix: No Unscheduled Report Warsaw [PL1]

GENERAL SUMMARY:

MY 2005/06 intervention purchases of Polish grain may be much higher than a year ago. As of January 8, 2006, Polish grain farmers declared 731,000 MT of grains available for intervention, of which 509,200 MT was wheat, 74,900 MT barley and 146,900 MT corn. This amount is about tree times more than a year ago. So far, contracts for delivery to intervention total more than 500,000 MT. AgAtt estimates that total purchases of Polish grain for intervention will reach 1.5 MMT, or 500,000 MT higher than last year.

Early during the intervention season (2005/06), most analysts were expecting significantly lower purchases of Polish grain into intervention because of a smaller grain crop, relatively large demand for feed from the livestock and poultry sectors and a strong local currency. However, a larger than expected grain crop, together with a reduction in poultry feed demand (due to reduced poultry consumption as a result of the Avian Influenza situation) kept local grain prices lower than expected, which increased pressure to sell into intervention. These influences were only somewhat offset by a stronger local currency, which has the effect of reducing the intervention price, since the intervention price is fixed in Euros but paid in local currency.

The intervention price for grains is about PLN 400 per MT. In contrast, the local price for milling wheat is PLN 360-380 per MT (Euro 95-100, \$115-122), for feed wheat PLN 340-360 per MT (Euro 89-95, \$109-115), for corn PLN 360-380 per MT (Euro 95-100, \$115-120), and for triticale is around PLN 330 per MT (Euro 87, \$106). With the exception of milling rye, these prices are about 10 percent lower than a year ago and 40 – 50 percent lower than two years ago. Supplies for intervention would be higher if not for the strict intervention quality requirements, delayed intervention payments and the minimum quantity requirement which hinders small farmers.

In its final crop results communiqué in December, the Poland's Main Statistical Office (GUS) raised its previous grain production estimate for 2005. Total grain production in Poland was revised upward to 26.9 MMT, or 0.5 MMT higher than the previous estimate due to higher than expected yields. The current total grain production estimate is 9 percent lower than the record 2004 crop.
